MEMORANDUM FOR THE RECORD

SUBJECT: Trip to [REDACTED]

25X1A

ATTENDEES: [REDACTED]

25X1A

A visit to the [REDACTED] was made 18 August 1964 between the hours of 0900 to 1300 to monitor the Variable Ratio Anamorphic Eyepieces Contract. [REDACTED] is manufacturing three eyepieces although we are only buying two of them. At the time of the visit one was completed enough so that we could use it. The following subjects were discussed:

25X1A

25X1A

1. The eyepiece that they have designed presents an inverted image. [REDACTED] was told that this was most objectionable and they were made more aware of the fact that they were in competition for any future eyepieces that may be purchased as a result of this development.

25X1A

2. The length of the eyepieces is long but under the six inch limit.

3. The field is elliptically distorted (about 20% out of round.

4. The rotation of the field is acceptable but we requested that an angular rotation indicator be manufactured into the tube.

5. The eyepiece does not stay in focus in the zoom range but there seems as if there is no corrective action that can be taken at this point.

6. The oblique imagery was left at [REDACTED] for their use. They promised that two eyepieces will be ready for final inspection and delivery by 1 September. It was agreed that we would pick up the eyepieces on this date along with the imagery. They will provide a box for carrying the eyepieces.
